

WESTPOINT VETERINARY GROUP

- Started in July 2000 with one goal – to provide dairy farmers with cost effective veterinary cover.

- Purely farm animal practice with offices covering South East England – from Kent and Sussex to East Anglia.
- Average herd size 300 – from 100 to 750 cow herds – with every type of system. Low or high input to low and high production Westpoint has experience.

WESTPOINT VETERINARY GROUP is the largest veterinary led livestock health business in the south east of England.

CONSULTANCY PRACTICE

A Nationwide Veterinary Consultancy.

How many farms have a vet as a true part of their consultancy team? The vet is often best placed on farm to say how the cows are doing from the inside out.

Westpoint aims to be part of the farm team. By looking at specific disease costs and setting control plans improvements in productivity will be gained.

Improved health leads to better productivity and an overall increase in farm profitability.

THE WESTPOINT TEAM

● ROB DRYSDALE Partner

A dairy vet for 10 years with farming experience from the USA and Canada to the UK.

Involved in on farm consulting with dairy herds from 100 to 750 cows on a routine basis. A regular speaker for the MDC and other farming groups plus a regular contributor to the farming press.

Areas of interest: heifer management, lameness control and farm economics (Livestock Business Reviews).

● MATT DOBBS Partner, CertCHP

A dairy vet with large herd experience from Australia to the US, Canada and the UK.

Involved with dairy farmer groups across the UK looking at health costs with special attention to mastitis and quality milk.

Matt has been extensively published in both farm and vet journals. A Nuffield Scholar and Lecturer at both Sydney and London Vet Schools.

Areas of interest: mastitis control, quality milk and whole farm disease costs.

Plus other vets provide advice on bull fertility, breeding soundness, youngstock rearing, nutrition, rationing and fertility.

WESTPOINT CONSULTING

Westpoint Consulting believes modern livestock farming requires a pre-emptive approach to health.

Healthy Stock = Profitable Stock.

- **Individual Farm Review** – look at disease on that unit.
- A proactive approach to ensure efficient production.
- Achieved through strategic plans – **Disease Control Plans.**
- Full & cost beneficial approach to all aspects of veterinary intervention.

Westpoint Consulting aims to provide the highest standard of health, production and economic planning for dairy enterprises through:

- **Partnership – farm, consultants & vet.**
- Applying latest technology and new strategies to approach problems.
- Producing effective & dynamic Farm Health Plan.
- Monitoring and reviewing farm progress at regular intervals.
- Controlling disease to improve profits.

QUALITY MILK SERVICE

Westpoint offers a Quality Milk Service to all its dairy clients.

Based on use of farm knowledge and data, cell count records and the Westpoint Mastitis Lab results, individual monthly control plans are produced.

The aim is to maximise milk quality payments through improved udder health and monitoring to ensure the maximum return on an annual basis.
